Jens Holger Rindel
Odeon A/S, Lyngby, Denmark

Agenda

- Why investigate diffusivity?
- Directional Diffusion and Steady State Diffusivity
- Defining the Dynamic Diffusion Curve (DDC)
- Normalising the DDC
- Typical features of the DDC
- DDC in (models of) 12 concert halls
- DDC as a function of distance in 2 halls
- DDC and flutter echo
- Conclusions

Motivation, why investigate diffusivity?

- Diffusivity is assumed to be important for the quality of concert halls
- Efforts are put into promoting diffuse reflections;
 - making surfaces scatter sound
 - shape of geometry
 - distribution of materials

Therefore we should understand better how given designs affect diffusivity in rooms.

Steady State Diffusivity

Thiele (1953) defined Directional Diffusion (d in %) as

$$d = \left(1 - \frac{\mu}{\mu_0}\right) \times 100\% = \frac{E - I}{E} \times 100\%$$

where E is sound energy and I is sound intensity

Directional Diffusion is usually close to 100%, so instead we may prefer to define Steady State Diffusivity in dB as:

$$D(ss) = 10 \times \log_{10}(E) - 10 \times \log_{10}(I) \quad [\text{dB}]$$

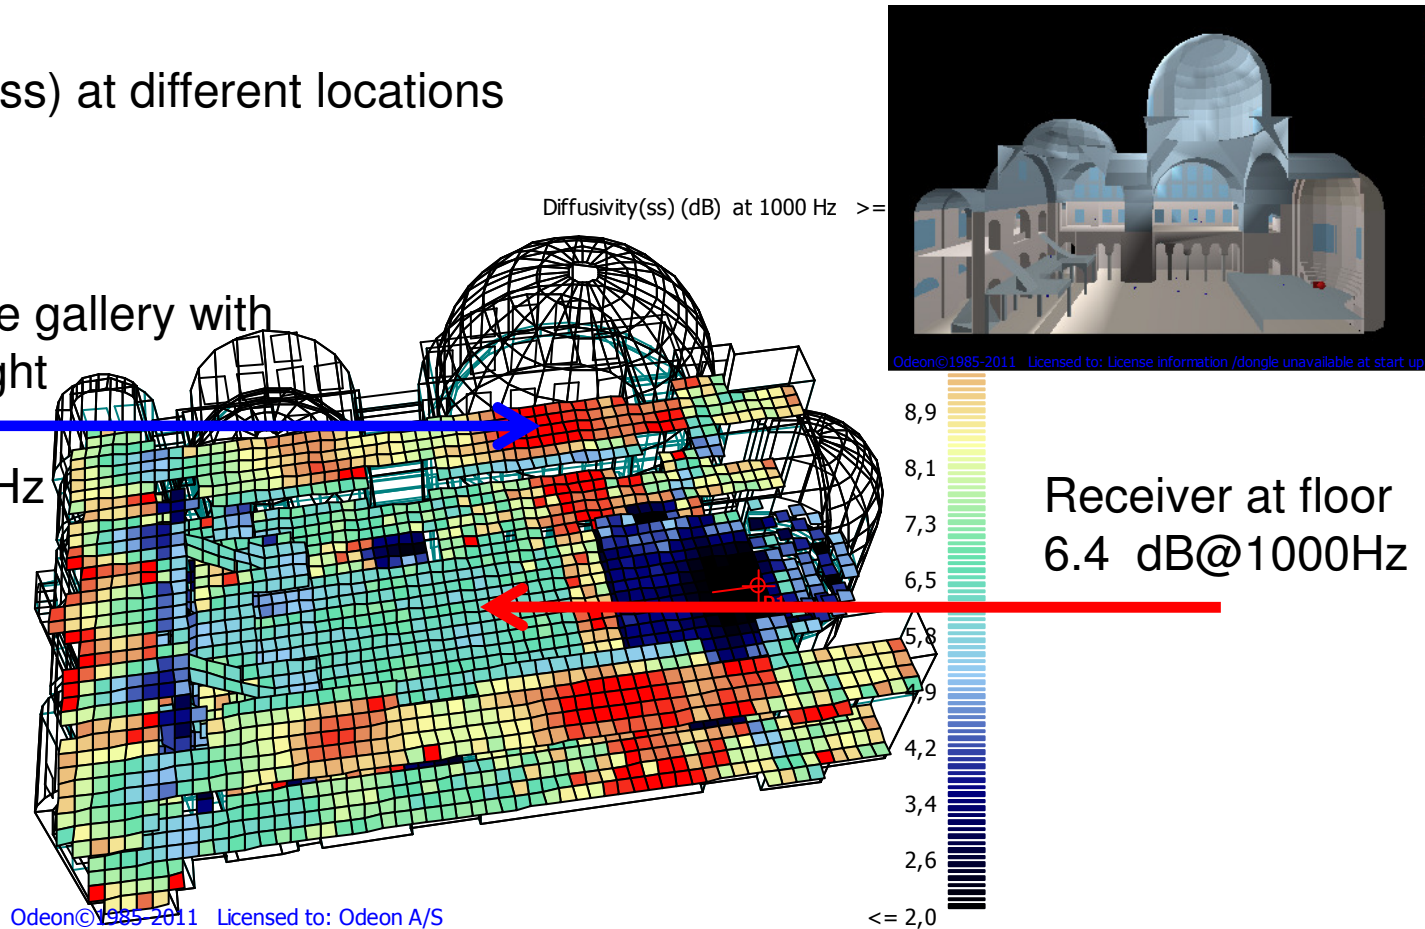

Note! $I = \sqrt{I_{8x}^2 + I_{8y}^2 + I_{8z}^2}$

Steady State Diffusivity

Example on $D(ss)$ at different locations

Receiver in side gallery with
no visible no sight

19.2 dB@1000Hz

Dynamic Diffusivity Curve – DDC energy and intensity curves

Backwards integrated squared impulse response curve

$$E(t_n) = 10 \times \log_{10} \int_{t=\infty}^{t=t_n} E(t) dt \quad [dB]$$

Backwards integrated intensity curve

$$I(t_n) = 10 \times \log_{10} \sqrt{\left(\int_{t=\infty}^{t=t_n} I(t)_{8x} dt \right)^2 + \left(\int_{t=\infty}^{t=t_n} I(t)_{8y} dt \right)^2 + \left(\int_{t=\infty}^{t=t_n} I(t)_{8z} dt \right)^2}$$

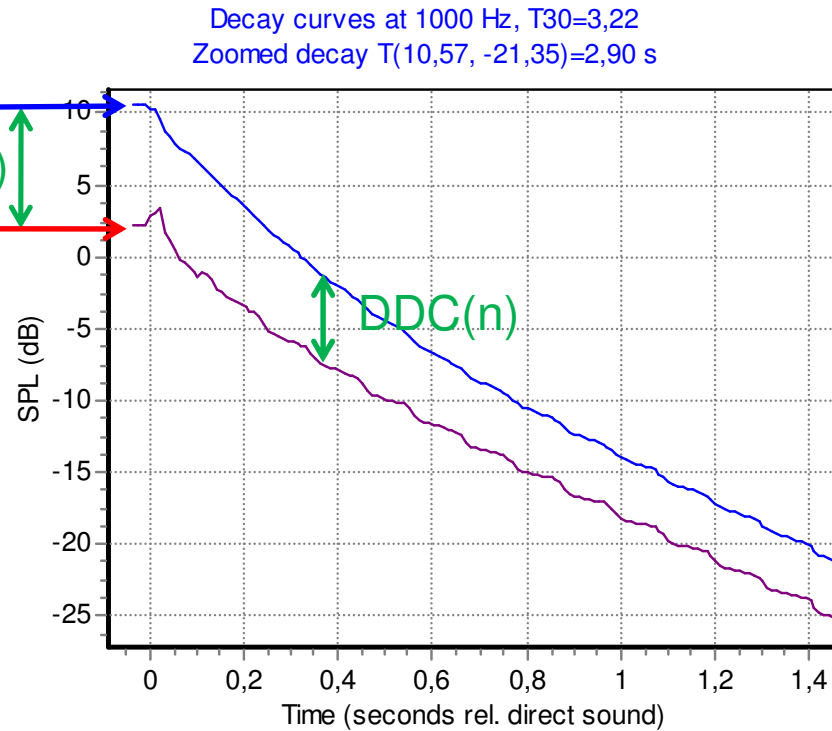

Dynamic Diffusivity Curve – DDC example; energy and intensity curves

Schröder curve

Backwards integrated
Intensity curve

$D(ss)$

DDC(n)

- E, Simulated
- E, Integrated
- E, Corrected
- I, Simulated
- I, Integrated

Dynamic Diffusivity Curve – DDC

DDC is the difference between energy and intensity curves

$$\begin{aligned} DDC(n) &= E(n) - I(n) \\ &= 10 \times \log_{10} \int_{t=\infty}^{t=t_n} E(t) dt \\ &\quad - 10 \times \log_{10} \sqrt{\left(\int_{t=\infty}^{t=t_n} I(t)_{8x} dt\right)^2 + \left(\int_{t=\infty}^{t=t_n} I(t)_{8y} dt\right)^2 + \left(\int_{t=\infty}^{t=t_n} I(t)_{8z} dt\right)^2} \quad [\text{dB}] \end{aligned}$$

Comparing DDC for rooms with different T30

Box shaped room 12 x 14 x 16

Odeon©1985-2011 Licensed to: Odeon A/S

T30=3.24s@1000 Hz
 All hard surfaces
 Low scattering

Odeon©1985-2011 Licensed to: Odeon A/S

T30=1.65s@1000 Hz
 hard surfaces+absorbing ceiling
 High scattering

Normalising DDC

- Use Schröder curve for normalization
- Substitute time axis with decay [dB]

Normalising DDC

Odeon©1985-2011 Licensed to: Odeon A/S

Odeon©1985-2011 Licensed to: Odeon A/S

$T_{30}=3.24s@1000\text{ Hz}$
 All hard surfaces
 Low scattering

$T_{30}=1.65s@1000\text{ Hz}$
 hard surfaces+absorbing ceiling
 High scattering

Typical features of DDC

- Initial value D_{ss} is lower than later values
- A peak appears within the first 5 (to 10) dB
- DDC reaches its plateau level after some 5 to 10 dB decay
- The plateau can have ripples e.g. in case of a flutter echo

12 Concert halls (models)

Source mid stage – receiver mid-parterre

Dss, Peak and Plateau levels

Two examples for comparison

Diffusivity(Dss) – Boston Symphony Hall

Floor level, only

20 30 40 metres

Diffusivity(total) (dB) at 1000 Hz $\geq 9,9$

DDC and flutter echo

Before treatment with scattering surfaces

After treatment with scattering surfaces

Conclusions

- Dynamic Diffusion Curve DDC is suggested for investigating dynamic behavior of diffusion during decay
- Features for rooms without echoes;
 - Starts with Steady State Diffusion – in auditoria 2-7 dB,
 - Peak value typically within first 5-10 dB of decay
 - Plateau level (rev. diffusion) – in auditoria 5-12 dB
- Features for rooms with echo problems, e.g. flutter echo;
 - Ripples (xx dB?)
- Further research, optimum values, JND's, better tools than DDC?, extract other information from the DDC etc...
